

SHD-U

Hopper Dryer

Stainless steel
all working surfaces are water and other substances resistant

Transport hooks
the dryer can be very easy lifted up and placed on a correct spot

Inspection door
gives a possibility to fast clean of main hopper

Central air diffuser
spread out hot air evenly, ensures a good drying properties

Magnetic base (optional)
can effectively separate metal scraps out to avoid material contamination

Hot air recycler (optional)
ensures a lower energy consumption and clean air in factory

Insulated hopper
and hose ensures safety and low energy consumption

Adjustment flange
gives a possibility to reduce air flow

Advanced PID controller
gives a possibility to set up drying time for each day

Standard base
ensures an easy installation directly on the injection machine throat

Material suction box (optional)
suitable for material suction by single or double suction needle 1,5" or 2"

Floor Stand (optional)
support dryer, easy for installation and transportation

Hopper Magnet (optional)
absorbs metal scraps in the material to avoid the damage of injection machine moulding screw
