

SG-36/43

Central Granulator

Cyclone dust separator

can effectively remove the air from regrind and facilitates material collecting

Fixed and rotating blades

Hardness 56HRC, steel SKD11

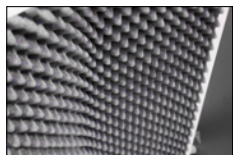

Rotating blades

"V" arrangement ensures high cutting efficiency

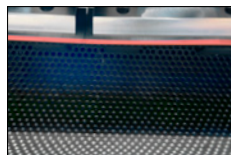

Profile

designed for quick blade replacement with easy rotating blades adjustment

Low noise structure

ensures low noise level

10 mm screen as a standard

optional 6,8,12, 17 mm

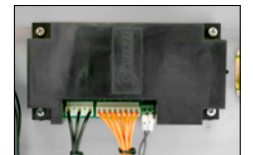

Colling cutting chamber
ensures easy low temperature material granulating

WEG motor
energy-saving, IE2 class

Phase sequence sensor
ensures correct direction of the main motor rotation

Large weight of fly wheel and shaft
can increase inertia, thereby increasing the cutting ability of bigger elements

Full receive alarm
device informs about granulator overloading
